This new design is coil with a very stable and high quality ferrite core and tiny size (10.5x1.4x2mm) and high sensitivity in low frequency range (20-40kHz). Those pieces are winding with thin copper wire up to 12μm and its inductances range is 350-630 mH. Besides, it has good frequency and temperature behaviour and can be served with “custom” electrics characteristics according requirements of hearing aid devices manufacturers.
